

Product Evaluation - Live Translate

- Student: Oktavianus Ludiro
- Date: 2026-07-15
- Video demo: <https://www.loom.com/share/cad45ddd1261432588899bb0d653ee05>
- LLM provider / model: OpenAI-compatible provider / gpt-5.6-luna (reported by /health)
- Backend target: <http://localhost:8787>

Verdict

The local backend passed every automated rubric criterion (70 / 70 auto points) and the benchmark SLA gate. It returned fluent Mexican-Spanish product UI strings and preserved the tested prices and product codes. This is not yet a complete shipping evaluation: a real-site Chrome-extension test could not be run in this environment because the browser-control bridge was unavailable, and no public Fly.io gateway was supplied or verified. Those two checks must be completed before submission.

Rubric score (from eval/report.json): 70 / 70 auto (+ 30 manual)

1. Performance & cost (from benchmark/bench.py)

Metric	Result	SLA	Pass?
Cache hit p95	4.5 ms	<= 60 ms	Yes
Cache miss p95	0.0 ms	<= 3500 ms	Gate passed; see note
Cache hit rate	100.0%	>= 60%	Yes
Throughput	2095.9 req/s	>= 20	Yes
Error rate	0.0%	<= 1%	Yes
Cost per miss	\$0.000000	-	-
Monthly savings from cache	\$0.00	-	-

The SLA gate exited successfully. The benchmark's reported miss p95 was 0.0 ms, indicating that the benchmark workload was already warm; it is not evidence of a real cache-miss latency measurement.

2. Live-website test

- Site tested: Not completed. The prescribed Home Depot/Chrome-extension test could not run because the available browser-control bridge failed during initialization.
- Translated whole page? Not observed.
- Coverage gaps: Not observed.
- Cache on re-translate: Direct gateway batch evidence: first run was 8,037 ms with six misses; the identical second run was 0 ms and all eight results had cached: true.
- Resilience: CSP, console errors, and layout integrity were not observed in a live page.
- Screenshots: None captured.

Sample translations (direct gateway batch test; not a live-page observation)

Original (EN)	Translation (es-MX)	Numbers/prices/codes kept?	OK?
Add to cart	Agregar al carrito	N/A	Yes
Free delivery on orders over \$45	Envío gratis en pedidos de más de \$45	\$45 preserved	Yes
Model ABC-123 is in stock	El modelo ABC-123 está disponible en inventario	ABC-123 preserved	Yes
Save 20% on select appliances	Ahorra 20% en electrodomésticos seleccionados	20% preserved	Yes
Choose a store for pickup	Elige una tienda para recoger tu pedido	N/A	Yes
Was \$199.99, now \$149.99	Antes \$199.99, ahora \$149.99	Both prices preserved	Yes
SKU 1001234567	SKU 1001234567	SKU preserved	Yes
Good morning, welcome!	¡Buenos días, bienvenido!	N/A	Yes

3. Dimension scorecard

Dimension	Pass / Partial / Fail	Evidence
Translation accuracy	Pass	Eight direct gateway samples were fluent and semantically correct.
Mexican-Spanish register (es-MX)	Pass	Samples use natural LatAm/Mexican-neutral wording such as “carrito”, “Envío gratis”, and “Elige”.
Numbers / prices / codes preserved	Pass	\$45, \$199.99, \$149.99, ABC-123, and SKU 1001234567 were unchanged.
Page coverage	Partial	Not measured on a real page.
Cache effectiveness	Pass	Direct repeat batch: 8,037 ms with misses, then 0 ms with all results cached; automated cache test also passed.
Latency vs SLA	Partial	SLA gate passed, but its miss p95 was 0.0 ms because the benchmark was already warm.
Error handling (no silent English)	Partial	Automated contract/error checks passed; an upstream-provider failure was not induced in this run.
Resilience on a real site	Partial	Not tested: browser-control bridge was unavailable.
UX polish	Partial	Not observed through the extension on a real page.

4. Top fixes before shipping

1. Run the extension on <https://www.homedepot.com> (or another site the student does not control), capture before/after screenshots, and record coverage, CSP behavior, and cache badges.
2. Deploy both services to Fly.io and add the public gateway URL plus a successful /health check to this report.
3. Clear the cache before one benchmark run so cache-miss latency is measured rather than reported as 0.0 ms from a warm workload.
